Summary

The federal government provides credit assistance to farmers to help assure adequate and reliable lending in rural areas, particularly for farmers who cannot obtain loans elsewhere. Federal farm loan programs also target credit to beginning farmers and socially disadvantaged groups.

The primary federal lender to farmers, though with a small share of the market, is the Farm Service Agency (FSA) in the U.S. Department of Agriculture (USDA). Congress funds FSA loans with annual discretionary appropriations—about \$79 million of budget authority and \$315 million for salaries—to support \$6.4 billion of new direct loans and guarantees. FSA issues direct loans to farmers who cannot qualify for regular credit and guarantees the repayment of loans made by other lenders. FSA thus is called a lender of last resort. Of about \$346 billion in total farm debt, FSA provides about 2.1% through direct loans and guarantees about another 4%-5% of loans.

Another federally related lender is the Farm Credit System (FCS)—cooperatively owned and funded by the sale of bonds in the financial markets. Congress sets the statutes that govern the FCS banks and lending associations, mandating that they serve agriculture-related borrowers. FCS makes loans to creditworthy farmers and is not a lender of last resort. FCS accounts for 41% of farm debt and is the largest lender for farm real estate.

Commercial banks are the other primary agricultural lender, holding slightly less than FCS with 42% of total farm debt. Commercial banks are the largest lender for farm production loans.

Generally speaking, the farm sector's balance sheet has remained strong in recent years. While delinquency rates on farm loans increased from 2008 into 2010 during the global financial crisis, farmers and agricultural lenders did not face credit problems as severe as those of other economic sectors. Since 2010, loan repayment rates have improved, but recent weakness in farm income has begun to put pressure on some farmers' loan repayment capacity.

Current Situation

Major Players and Market Shares

The federal government has a long history of assisting farmers with obtaining loans for farming. This intervention has been justified at one time or another by many factors, including the presence of asymmetric information among lenders, asymmetric information between lenders and farmers, lack of competition in some rural lending markets, insufficient lending resources in rural areas compared to more populated areas, and the desire for targeted lending to disadvantaged groups (such as small farms or socially disadvantaged farmers).¹

Several types of lenders make loans to farmers. Some are government entities or have a statutory mandate to serve agriculture. The one most controlled by the federal government is the Farm Service Agency (FSA) in the U.S. Department of Agriculture (USDA). It receives federal appropriations to make direct loans to farmers and to issue guarantees on loans made by commercial lenders to farmers who do not qualify for regular credit. FSA is a lender of last resort, but also of first opportunity because it targets loans or reserves funds for disadvantaged groups.

The lender with the next-largest amount of government intervention is the Farm Credit System (FCS). It is a cooperatively owned and funded—but federally chartered—private lender with a statutory mandate to serve agriculture-related borrowers only. FCS makes loans to creditworthy farmers, and is *not* a lender of last resort, but is a government-sponsored enterprise (GSE). Third is Farmer Mac, another GSE that is privately held, and provides a secondary market for agricultural loans. FSA, FCS, and Farmer Mac are described in more detail later in this report.

Other lenders do not have direct government involvement in their funding or existence. These include commercial banks, life insurance companies, and individuals, merchants, and dealers.

Figure 1 shows that the FCS and commercial banks provide most of the farm credit (41% and 42%, respectively), followed by individuals and others (9.4%), and life insurance companies (3.8%; based on 2013 USDA data, the most recent year with such detail).² FSA provides about 2.1% of the debt through direct loans. FSA also guarantees about another 4%-5% of the market through loans that are made by commercial banks and the FCS.

The total amount of farm debt (\$346 billion at the end of 2014) is concentrated relatively more in real estate debt (57%) than in non-real estate debt (43%). FCS is the largest lender for real estate (46%), and both commercial banks' and FCS's shares have grown as others' shares have decreased (**Figure 2**). Commercial banks are the largest lender for non-real estate loans (49%), although FCS has gained share in recent years as the shares by others have decreased (**Figure 3**).

As the figures show, market shares among these lenders have changed over time. Commercial banks held relatively little farm real estate debt through 1985, but now hold a sizeable amount (**Figure 2**). The share of loans from "individuals and others" has steadily decreased over time, with fewer private contracts for farm real estate and relatively less dealer financing in operating credits. FSA held a much larger share of farm debt during the farm financial crisis of the 1980s, but that ratio declined as the farm economy improved through the 1990s (**Figure 3**).

The Farm Balance Sheet

As a whole, farm sector assets have remained strong despite pressure on other real estate sectors. The value of farm assets has grown steadily since the end of the 1980s, particularly since 2003. At the end of 2015, farm sector assets were \$2.9 trillion, after experiencing their first year of decline in two decades. In 2016, USDA forecasts that farm assets will decrease 1.6% (**Figure 4**). The Federal Reserve has also found declining land values in the Midwest and Great Plains.³ Total farm assets now exceed the previous peak from 1980 in inflation-adjusted terms. Real estate is about 82% of the total amount of farm assets; machinery and vehicles are the next-largest category at about 9% of the total.⁴

Farm debt reached a historic high of \$364 billion at the end of 2015 (**Figure 5**). USDA forecasts that debt will increase 2.3% in 2016. In inflation-adjusted terms, however, this level of debt is still well below the peak debt levels of the 1980s.

Debts and assets can be compared in a single measure by dividing debts by assets—the debt-to-asset ratio. A lower debt-to-asset ratio generally implies less financial risk to the sector than a higher ratio. Farm debt-to-asset ratio levels have declined fairly steadily since the late 1980s after the farm financial crisis, and reached a historic low of 11.3% in 2012. When farm asset growth paused in 2009-2010, the debt-to-asset ratio rose to 12.9% (**Figure 6**). Following the historic lows of 2012, the debt-to-asset ratio rose into 2015 and is forecasted to increase again in 2016. But as a whole, farms are not as highly leveraged as they were in the 1980s.

Net farm income has become more variable, especially since 2000. After reaching historic highs in 2004, net farm income fell by a third in two years (**Figure 7**). After peaking again in 2008, net farm income fell by 25% in one year. New net farm income highs were set in 2011 and 2013, but USDA's February 2016 forecast of \$55 billion would be a 56% decline from 2013.⁵ The relatively low net farm income forecasted for 2016 is 34% below the 10-year average.⁶

Government payments to farmers also have risen from decades ago, but do not always offset the variability in net farm income. Fixed direct payments that were not tied to prices or revenue were the primary form of government payments in recent years; these payments supported farm income but did not necessarily help farmers manage risks. **Figure 8** shows that more of net farm income is coming from the market rather than the government, compared to the 1980s.

Another indicator of leverage compares debt to net farm income. A lower debt-to-income ratio (with the ratio expressing the number of years of current income that debt represents) implies less financial risk. The farm-debt-to-net-farm-income ratio is more variable than the debt-to-asset ratio. It reached a 35-year low of 2.3 in 2004 and rose to 4.3 in 2009 before falling again to 2.6 in 2013. However, the expected decline in net farm income in 2014-2015 has caused it to rise to a forecasted level (6.8) not seen since the 1980s, outside the 50-year historical range of 2 to 4 (**Figure 9**). This is leading to a rise in repayment risk.⁷

Delinquency Rates on Farm Loans

While the global financial crisis in 2008-2009 was slower to affect the balance sheets of farmers and agricultural lenders than the housing market, its presence was observed in agricultural lending. Credit standards were tightened (more documentation and oversight of loans was required) and lenders sometimes made less credit available to producers. As the lender of last resort, the USDA Farm Service Agency experienced significantly higher demand for its direct loans and guarantees.

In 2007, 2008, and 2010, farm commodity prices were particularly high, supporting farm income at above-average levels. But in 2006 and 2009, net farm income fell by about one-third (**Figure 7**), reducing some farmers' ability to repay loans, particularly in some farm sectors such as dairy, hogs, and poultry. Strong farm income from 2011 to 2013 improved most farmers' ability to repay loans. But weakness in farm income since 2014 has increased pressure on some farmers' repayment capacity.⁸

Delinquency rates include loans that are 30 days or more past due and still accruing interest, as well as those in nonaccrual status. The delinquency rates on residential mortgages and all loans appear to have reached a recent peak in mid-2010 (11.3% for residential mortgages and 7.4% for all commercial bank loans, **Figure 10**). The delinquency rates for agricultural loans did not begin to rise until mid-2008, after continuing to fall to historic lows while delinquencies were rising in residential mortgages and other loans. Moreover, the rate of increase in delinquencies on farm production loans at commercial banks was not as sharp as in the non-farm sectors and peaked in June 2010 at 3.3%. Delinquency rates on farm production loans at commercial banks returned to historic lows below 1%, but have risen slightly and stabilized again in 2015.⁹

A more severe measure of loan performance is nonperforming loans. Nonperforming loans include nonaccrual loans and accruing loans 90 days or more past due. These loans are more in jeopardy than delinquent loans, and represent a smaller subset of loans. Within the agricultural loan portfolio, FCS nonperforming loans rose from 0.5% at the beginning of 2008 to a near-term peak of 2.8% on September 30, 2009, before decreasing to 0.73% at the end of 2015 (**Figure 11**).¹⁰ The FCS nonperforming loan rate has returned to levels of the 2001-2007 period after the system had recovered from the farm financial crisis of the 1980s.

Nonperforming farm loans at commercial banks also rose during the 2008-2010 financial crisis but have declined to more normal levels. Nonperforming farm real estate loans at commercial banks rose from a low of 0.7% in December 2006 to 2.9% in March 2011, before declining to 1.1% as of December 31, 2014. Nonperforming farm production loans rose from a low of 0.6% in December 2006 to 2.4% in March 2010, before declining again to 0.4% as of December 31, 2014 (**Figure 11**). Both commercial bank nonperforming rates for farm real estate and farm production loans rose slightly in the first two quarters of 2015 and fell again in the third quarter.¹¹

Description of Government-Related Farm Lenders

USDA Farm Service Agency (FSA)

USDA's Farm Service Agency is considered a lender of last resort because it makes direct farm ownership and operating loans to family-sized farms that are unable to obtain credit elsewhere. FSA also guarantees timely payment of principal and interest on qualified loans made by commercial banks and the FCS. Permanent authority exists in the Consolidated Farm and Rural Development Act (7 U.S.C. 1921 *et seq.*) and is usually modified in periodic farm bills.

Prior to the banking crisis in 2008, FSA usually made and guaranteed about \$3.5 billion of farm loans annually. Supplemental appropriations during the financial crisis raised FSA loan activity to about \$6.0 billion in FY2010. In FY2015, an appropriation of \$79 million in budget authority (plus \$315 million for salaries and expenses) supports the issuance of \$6.4 billion of new direct loans and guarantees.¹²

Direct loans are limited to \$300,000 per borrower (\$35,000 for microloans), and guaranteed loans to \$1,392,000 per borrower (adjusted annually for inflation). Direct emergency loans are available for disasters.¹³

Part of the FSA loan program is reserved for beginning farmers and ranchers (7 U.S.C. 1994 (b)(2)). For direct loans, 75% of the funding for farm ownership loans and 50% of operating loans are reserved for the first 11 months of the fiscal year. For guaranteed loans, 40% is reserved for ownership loans and farm operating loans for the first half of the fiscal year. Funds are also targeted to "socially disadvantaged" farmers by race, gender, and ethnicity (7 U.S.C. 2003). Because of these provisions, FSA also is known as lender of first opportunity for borrowers who may not yet be creditworthy enough to obtain regular commercial business loans.

Farm Credit System (FCS)

Congress established the Farm Credit System in 1916 to provide a dependable and affordable source of credit to rural areas at a time when commercial lenders avoided farm loans. FCS is neither a government agency nor guaranteed by the U.S. government, but is a network of borrower-owned lending institutions operating as a government-sponsored enterprise (GSE). It is not a lender of last resort; it is a for-profit lender with a statutory mandate to serve agriculture. Funds are raised through the sale of bonds on Wall Street. Four large banks allocate these funds to 76 credit associations that, in turn, make loans to eligible creditworthy borrowers.¹⁴

Statutes and oversight by the House and Senate Agriculture Committees determine the scope of FCS activity (Farm Credit Act of 1971, as amended; 12 U.S.C. 2001 *et seq.*). Benefits such as tax exemptions also are provided. Eligibility is limited to farmers, certain farm-related agribusinesses, rural homeowners in towns under 2,500 population, and cooperatives.¹⁵ The federal regulator is the Farm Credit Administration (FCA).¹⁶

¹⁴ Farm Credit System, at <http://www.farmcreditnetwork.com>.

¹⁵ CRS Report RS21278, *Farm Credit System*.

¹⁶ Farm Credit Administration, at <http://www.fca.gov/index.html>.

Farmer Mac

Farmer Mac is a separate GSE that is a secondary market for agricultural loans.¹⁷ Some consider it related to the FCS in that FCA is its regulator and that it was created by the same legislation, but it is financially and organizationally a separate entity. Farmer Mac purchases mortgages from lenders and guarantees mortgage-backed securities that are bought by investors. Permanent authority rests in the Farm Credit Act of 1971 (12 U.S.C. 2001 *et seq.*).

Recent Congressional Issues

Competition Between Farm Credit System and Commercial Banks

The Farm Credit System is unique among the GSEs because it is a retail lender making loans directly to farmers and thus is in direct competition with commercial banks. Because of this direct competition for creditworthy borrowers, the FCS and commercial banks often have an adversarial relationship in the policy realm. Commercial banks assert unfair competition from the FCS for borrowers because of tax advantages that can lower the relative cost of funds for the FCS.¹⁸ They often call for increased congressional oversight. The FCS counters by citing its statutory mandate (and limitations) to serve agricultural borrowers in good times and bad times.¹⁹

In contrast, the Farm Service Agency's loan programs are supported by both the FCS and commercial banks. FSA is not regarded as a competitor since it serves farmers who otherwise may not be able to obtain credit. Commercial banks and the Farm Credit System particularly support the FSA loan guarantee program because it allows them to make and service loans that otherwise might not be possible or at reduced risk.

Credit Title in the 2014 Farm Bill

The enacted 2014 farm bill (P.L. 113-79) made relatively small policy changes to USDA's permanently authorized farm loan programs.

It gave USDA discretion to recognize alternative legal entities to qualify for farm loans and allowed alternatives to meet a three-year farming experience requirement. It increased the maximum size of down-payment loans and eliminated term limits on guaranteed operating loans (by removing a maximum number of years that an individual can remain eligible). It increased the percentage of a conservation loan that can be guaranteed, added another lending priority for beginning farmers, and facilitated loans for the purchase of highly fractionated land in Indian reservations, among other changes.²⁰

The 2014 farm bill made one notable yet relatively small change to the permanent statutes for the Farm Credit System. It established the congressional intent that compensation disclosure of FCS executives rests with FCS boards of directors, rather than elsewhere, such as with shareholders.²¹

²¹ In 2012, the Farm Credit Administration had published a rule that provided for advisory votes by shareholders on (continued...)

Term Limits on USDA Farm Loans

Congress added “term limits” to the USDA farm loan program in 1992 and 1996 to restrict eligibility for government farm loans and encourage farmers to “graduate” to commercial loans. The term limits place a maximum number of years that farmers are eligible for certain types of FSA loans or guarantees. However, until the end of 2010, Congress had suspended enforcement of term limits on guaranteed operating loans to prevent some farmers from being denied credit, and the 2014 farm bill eliminated that term limit (**Table 1**).

Table 1. Term Limits on Farm Service Agency Loans

Maximum number of years that farmers are eligible for loans

Type of FSA Loan	Direct loans term limits	Guaranteed loans term limits
Farm Operating Loans (OL)	6 years, plus possible 2-yr. extension ^a	No term limit ^b
Farm Ownership Loans (FO)	10 years ^c	No term limit ^d

Source: CRS, based on statute and unpublished USDA data.

Note: Term limits are separate from the maximum maturity or duration of an individual loan, which may be as long as 40 years for a farm ownership loan or as short as one year for a farm operating loan.

- Direct operating loans are limited to a six-year period. In certain cases, borrowers may qualify for a one-time, two-year extension (7 U.S.C. 1941(c)(1)(C) and (c)(4)). In June 2009, USDA said that about 4,800 FSA borrowers were limited to one more year, and another 7,800 borrowers were limited to two more years. USDA did not expect many to graduate to commercial credit (USDA-FSA Administrator, testimony to the House Agriculture Subcommittee on Conservation, Credit, Energy and Research, June 11, 2009).
- Prior to the 2014 farm bill, guaranteed operating loans were limited to a 15-year period (former 7 U.S.C. 1949(b)(1)). However, enforcement of that term limit was suspended by statute until December 31, 2010. Upon expiration of the suspension, the 15-year term limit was enforced from 2011-2013. In December 2010, USDA had said that about 1,600 borrowers had reached the guaranteed term limit. The 2014 farm bill permanently removed this term limit (P.L. 113-79 §5107).
- A borrower is eligible for direct farm ownership (real estate) loans for a maximum of 10 years after the first loan is made (7 U.S.C. 1922(b)(1)(C)).
- USDA-FSA, *Evaluating the Relative Cost Effectiveness of the Farm Service Agency’s Farm Loan Programs*, report to Congress, August 2006, p. 76, at http://www.fsa.usda.gov/Internet/FSA_File/farm_loan_study_august_06.pdf.
